Vaccine Impact News

One of the interesting side effects of the COVID [Plandemic](#), and the rush to bring to market a new, untested COVID vaccine, is that many people around the world have become more skeptical of vaccines, and for good reason.

However, the problems associated with vaccines have been around for decades, and as we have documented frequently here at *Health Impact News* on our [VaccineImpact.com](#) website, the annual flu vaccine is, by far, the most dangerous vaccine in the world, causing more injuries and deaths than all other vaccines put together.

This is not a conspiracy theory, but a fact based on the sheer volume of settlements that the U.S. Government makes every year in the Vaccine Court for injuries and deaths due to the flu shot.

We publish these reports every quarter, and [past reports can be found here](#), where you can view the data yourselves.

Every year people are harmed and killed by the flu shot, but this information is censored in the U.S.

So it is highly unlikely that the death of 25 people in South Korea just after receiving the flu shot would have even made the news at all in the years pre-COVID. Because this pretty much happens every year when the flu season starts and mass vaccination of the public for influenza begins.

With literally hundreds of millions of doses of the flu vaccine being manufactured every year, a few hundred, or even a few thousand deaths, is generally not noticeable as doctors are not trained to look for vaccine injuries, and **the vaccine will never be blamed**.

But with the attention of the public on the upcoming COVID vaccine and a newfound interest in actually looking into the politics and science of vaccines, all of a sudden people are starting to sit up and take notice.

## South Korean's medical association urges govt to suspend flu shot program after 25 people die following jab

by [RT.com](#)

Excerpts:

The Korean Medical Association has called on the country's government to halt its plan to inoculate millions of citizens after more than two dozen people died after receiving flu shots.

The vaccine initiative, billed as a strategy to potentially offset complications from Covid-19, aims to provide free flu jabs to 19 million people. But the ambitious undertaking has come under fire after 25 people died, including a 17-year-old boy and a man in his 70s, after participating in the program. The number jumped from 12 deaths reported earlier on Thursday.

The vaccination drive was suspended for three weeks after it was revealed that around five million doses, which require refrigeration, had been stored at room temperature while being

Dr. Andrew Moulden:  
Every Vaccine Produces Harm

Canadian physician Dr. Andrew Moulden provided clear scientific evidence to prove that every dose of vaccine given to a child or an adult produces harm. The truth that he uncovered was rejected by the conventional medical system and the pharmaceutical industry. Nevertheless, his warning and his message to America remains as a solid legacy of the man who stood up against big pharma and their program to vaccinate every person on the Earth.

Dr. Moulden died unexpectedly in November of 2013 at age 49.

Because of the strong opposition from big pharma concerning Dr. Moulden's research, we became concerned that the name of this brilliant researcher and his life's work had nearly been deleted from the internet. His reputation was being disparaged, and his message of warning and hope was being distorted and buried without a tombstone. This book summarizes his teaching and is a must-read for everyone who wants to learn the "other-side" of the vaccine debate that the mainstream media routinely censors.
