STOP! Manipulations, masks, lies, fear ... an international collective of health professionals denounces

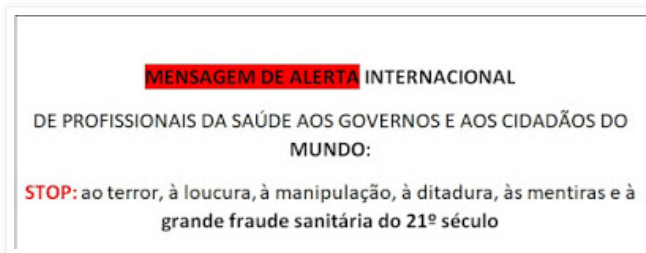

September 2, 2020 Robert Bibeau

By [Réseau International](#) .

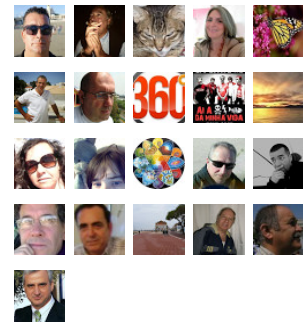

A collective of health professionals today launched an "International Alert Message" for governments and citizens around the world. Among the signatories, doctors from several countries and several professors of medicine, including microbiologist Martin Haditsh.

The collective returns to the real danger of the virus, the manipulation of numbers, the role of WHO, the consequences of confinement or the use of a mask and, in particular, calls on governments to "lift all restrictions and obligations on citizens". You can

We health professionals in several countries around the world:

1. We say : STOP with all the crazy and disproportionate measures that were taken from the beginning to fight SARS-CoV-2 (confinement, blocking the economy and education, social distance, wearing masks for everyone, etc.) because they are totally unjustified, are not based on any scientific evidence and violate the basic principles of evidence-based medicine. On the other hand, of course, we support reasonable measures, such as recommendations for washing your hands, sneezing or coughing in the elbow, using a disposable tissue, etc.

This is not the first time that humanity has faced a new virus: it discovered H2N2 in 1957, H3N2 in 1968, SARS-CoV in 2003, H5N1 in 2004, H1N1 in 2009, MERS-CoV in 2012 and faces the seasonal flu virus annually. However, none of the measures taken for SARS-CoV-2 have been taken for these viruses.

They tell us:

" **But SARS-CoV-2 is very contagious** " and we reply: IT IS FALSE. This claim is also rejected by internationally renowned experts. A simple comparison with other viruses shows that the spread of SARS-CoV-2 is moderate. They are diseases like measles that can be described as highly contagious. For example, a person with measles can infect up to 20 people, while a person infected with this coronavirus infects only 2 or 3, which is 10 times less than measles.

- " **But, this is a new virus** " and we answered: H1N1 and the other viruses mentioned were also new viruses. Still: we didn't confine countries, we didn't block the world economy, we didn't paralyze the educational system, we didn't implement social distance and we didn't tell people healthy people to wear masks. In addition, some experts claim that it is possible that this virus was circulating before, but we did not realize it.

- " **But we don't have a vaccine** " and we answered: at the beginning of H1N1 we didn't have a vaccine, as in the days of SARS-CoV. Still: we did not confine countries, we did not block the world economy, we did not paralyze the educational system, we did not make social distances and we did not tell people healthy people to wear masks.

- " **But, this virus is much more deadly** " and we answer: **IT IS FALSE** . Because only in comparison with the flu and if we take into account the period between the 1st of November and the 31st of March, there were worldwide - as soon as these measures were taken - 860,000 cases and 40,000 deaths while **the flu in the same period 5 months infects an average of 420 million people and kills 270,000** . In addition, the mortality rate announced by the **WHO** (3.4%) was grossly overestimated and was rejected from the beginning by leading experts in epidemiology. But, even taking into account this fatality rate, we see that this coronavirus is three times less fatal than that of 2003 (10%) and 10 times less fatal than that of 2012 (35%).

- " **But, COVID-19 is a serious disease** " and we answered: **IT IS FALSE. SARS-CoV-2 is a benign virus for the general population because it gives 85% of benign forms, 99% of infected individuals are cured** , it does not pose a danger to pregnant women and also to children (unlike flu), spreads less quickly than the flu, and 90% of those who die are elderly (who must, of course, be protected like other populations at risk). That is why experts qualified the claim that it is a serious illness as "delusional" and said on 19 August that "it is no worse than the flu".

- " **But there are asymptomatic people** " and we answer: in the flu too, 77% of those infected are asymptomatic and can also transmit the virus. However: healthy individuals are not instructed to wear masks every year and we do not practice social detachment, despite the **flu infecting 1 billion people and killing 650,000** .

- " **But, this virus is causing a saturation of hospitals** " and we answered: **IT IS FALSE** . Saturation affects only a few hospitals, but people are led to believe that the entire hospital system is saturated or that saturation is imminent when there are thousands of

LEARN MORE OK

hospitals are saturated because they are epidemic centers (such as Lombardy in Italy or New York in the USA). It should not be forgotten that hospitals in many countries were overwhelmed (including intensive care) in

previous flu epidemics and that at that time there was even talk of: "tsunami" of patients in hospitals ", overcrowded hospitals", tents erected outside hospitals , "War zones", "destroyed hospitals" and "state of emergency". [...]

2. We say : STOP with these crazy measures also because of its catastrophic consequences that have already started to appear: suicide of anguished people as it was reported in China, development of psychiatric pathologies, paralysis of the educational path of students and students to university, negative impacts and dangers for animals, neglect of other diseases (especially chronic) and increased mortality, increased domestic violence, economic losses, unemployment, major economic crisis [...], serious consequences for agriculture, destabilization of countries and social peace and risk of wars breaking out. [...]

3. We refuse to require **contact tracking** applications, as is the case in some countries, because SARS-CoV-2 is a benign virus that does not justify such an action. In addition, according to international recommendations and regardless of the severity of a pandemic (moderate, high, very high), contact tracking is not recommended. In flu epidemics, do we track contacts? However, the flu virus infects many more people and holds many more

populations at risk than this coronavirus.

4. We say: STOP to censure experts and health professionals to prevent them from telling the truth (especially in countries that claim to be democratic).

5. Compartilhamos a opinião de especialistas que denunciam a inclusão da triagem na contagem dos casos, mesmo que os sujeitos estejam bem e sejam assintomáticos.

Isso resultou numa sobre-estimação dos casos. Relembramos que a definição de um caso em epidemiologia é: "a ocorrência de muitos desfechos possíveis: doenças, complicações, sequelas, óbito. Na chamada vigilância sindrômica, definimos como caso a ocorrência de eventos inespecíficos tal como grupos de sintomas ou motivos de procura de cuidados de saúde, hospitalizações, chamadas para serviços de urgência ". Nós dizemos, portanto: é necessário separar os rastreios dos casos e devemos parar de misturá-los.

6. Compartilhamos a opinião dos especialistas que denunciam o facto de não se fazer distinção entre pessoas que morreram com o vírus e pessoas que morreram com o vírus (com comorbidades), sendo a causa da morte atribuída ao SARS-CoV-2 sem teste ou autópsia e que os médicos sejam pressionados a marcar o COVID-19 como a causa da morte, mesmo que o paciente tenha morrido de outra coisa. Isso leva a uma sobre-estimação do número de mortes e constitui uma manipulação escandalosa dos números porque durante epidemias de gripe sazonal, por exemplo, não trabalhamos assim. Mais de 20% dos pacientes com COVID também estão co-infectados com outros vírus respiratórios. Após a reavaliação, apenas 12% das declarações de óbito num país europeu se mostraram como causa directa do coronavírus. Noutro país europeu, os professores Yoon Loke e Carl Heneghan mostraram que um paciente com teste positivo, mas tratado com sucesso e, em seguida, com alta do hospital ainda será contado como morte por COVID, mesmo que tenha tido uma crise cardíaca ou tenha sido atropelado por um autocarro três meses depois. O director do CDC (Centro para o Controle e Prevenção de Doenças) de um país da América do Norte admitiu em 31 de Julho que os hospitais tinham um incentivo financeiro perverso para inflacionar o número de mortes por coronavírus.

7. Partilhamos a opinião dos especialistas que alertam contra a intubação quase sistemática de alguns pacientes, devido ao medo louco do vírus. Os protocolos devem ser alterados porque resultaram num número elevado de mortes.

20%. Alguns artigos científicos que relatam esses casos falsos positivos foram censurados. Por isso dizemos: STOP a obrigatoriedade dos testes de triagem por causa dessa insegurança e da falta de verificação do seu desempenho e porque nada neste coronavírus (que é um vírus benigno e com baixo índice de letalidade) justifica isso. Como dissemos: A gripe infecta 1 bilhão de pessoas a cada ano - 30 vezes mais do que a SARS-CoV-2 e, ainda assim, nenhum teste é necessário para viajar.

9. Dizemos aos cidadãos: não temam, este vírus é benigno, a menos que esteja entre as populações de risco. Se os canais de TV fizerem o mesmo com a gripe, os números serão muito maiores do que com o coronavírus! A TV irá reportar para si em média todos os dias: 3 milhões de casos e 2.000 mortes por gripe. E para a tuberculose, a televisão vai noticiar todos os dias, em média: 30.000 casos e 5.000 mortes. Na verdade, o vírus da gripe infecta 1 bilhão de pessoas a cada ano e mata 650.000, e a tuberculose infecta 10,4 milhões a cada ano e mata 1,8 milhão de pessoas. Além disso, na TV, você é informado de "casos" quando se trata de projecções e não de casos. [...]

10. Dizemos aos cidadãos: a lavagem das mãos é um reflexo que devemos ter ao longo da vida, haja ou não o coronavírus, porque é a medida de higiene mais eficaz. Mas, usar máscara quando não está doente e praticar distanciamento social não faz parte da higiene nem da preservação da saúde pública, é uma loucura. Usar máscara por muito tempo tem vários efeitos indesejáveis na sua saúde e a transforma num ninho de germes. "O vírus pode concentrar-se na máscara e quando você a tira, o vírus pode ser transferido para as suas mãos e, assim, espalhar-se", disse o Dr. Anders Tegnell, epidemiologista. Quando questionada se as pessoas correm um risco maior ao usar máscaras, a Dra. Jenny Harries respondeu: "Por causa desses problemas de manuseio [de máscaras], as pessoas podem colocar-se num risco maior." [...] É preciso saber que a boca e o nariz não são feitos para serem tapados. O que você veste é uma máscara, aparentemente, mas na realidade trata-se de um constrangimento para a sua liberdade. Especialmente porque, como dizem vários especialistas, incluindo o professor Yoram Lass, a epidemia acabou na maioria dos países e aqueles que dizem o contrário são MENTIROÇOS. Ao dizer a si mesmo que a epidemia não acabou, ao brandir a ameaça de uma 2ª vaga (que não se baseia em nenhuma evidência), ao pedir para você usar máscara e fazer distanciamento social, o objectivo é, na verdade, prolongar o medo até que uma vacina seja feita e ela seja mais bem aceite por si.

11. Dizemos às companhias aéreas: vários estudos científicos demonstraram uma ligação entre a higiene excessiva e o desenvolvimento de doenças como as doenças alérgicas, as doenças auto-imunes, as doenças inflamatórias ou certos cancros. É o que dizemos em medicina: a hipótese higienista. Portanto, pare com as operações de desinfecção e tire as máscaras e os ridículos trajes de protecção dos seus funcionários que vimos na media. Fazer isso é uma loucura. Os aeroportos também devem parar de medir a temperatura e as quarentenas. SARS-CoV-2 não é a Peste Negra. Vocês também, tal como os cidadãos, foram manipulados.

12. Dizemos aos governos: levantem todas as restrições e obrigações sobre os cidadãos (estado de emergência, uso obrigatório de máscara, distanciamento social, etc.) porque elas são estúpidas e puramente ditatoriais e não têm nada a ver com medicina ou higiene ou preservação da saúde pública. Não há nenhuma razão científica ou médica para que cidadãos não doentes usem máscara. O médico Pascal Sacré, anestesiolologista-ressuscitador, disse: "Forçar todos a usá-las o tempo todo, enquanto a epidemia desaparece, é uma aberração científica e médica." O professor Didier Raoult afirma: "A decisão de confinar, como a decisão de usar máscaras... não se baseia em dados científicos..." [...]. O professor Maël Lemoine também especificou que a mudança no discurso sobre as máscaras é: "política, não científica". Nalguns países asiáticos, as pessoas usam máscaras o ano todo (para se proteger da poluição, entre outras coisas). Esse uso generalizado de máscaras nesses países impediu-os de ter epidemias de coronavírus? Esse uso generalizado de máscaras nesses países impediu-os de ter epidemias de gripe ou outros vírus respiratórios todos os anos? A resposta é, obviamente, não. [...]

13. Dizemos às forças da ordem: os cidadãos devem muito a vocês porque vocês são todos os dias o garante da sua segurança e do respeito da lei e da ordem. Mas, cumprir a lei não significa submeter-se cegamente a ordens injustas. Foi esse erro que levou à Segunda Guerra Mundial e à morte de 50 milhões de pessoas. Portanto, dizemos-lhes: façam cumprir a lei, mas não a injustiça e a ditadura, recusem impor essas medidas, recusem punir os vossos concidadãos (quando não estiverem a usar máscara, por exemplo), não bata neles, não os aprisione. Não sejam os instrumentos da ditadura. [...]

14. Dizemos aos cidadãos: é preciso respeitar a lei. Mas, isso não significa submissão cega à loucura, injustiça ou ditadura. Foi essa submissão cega dos cidadãos às leis injustas que levou à Segunda Guerra Mundial, com a morte de 50 milhões de pessoas. Você nasceu livre e deve viver livre, portanto: não tenha medo e se não estiver doente: tire as máscaras, saia de casa como quiser e sem distanciamento social, mas faça-o com paz e sem violência. Os professores Carl Heneghan e Tom Jefferson, epidemiologistas com grande experiência em medicina baseada em evidências, dizem:

Os sucessos da OMS são inegáveis: milhões de vidas foram salvas graças aos programas de vacinação contra a varíola e o consumo de tabaco foi reduzido em todo o mundo. Mas o maior problema com a OMS é que por vários anos ela foi 80% financiada por empresas (especialmente empresas farmacêuticas) e doadores

privados (incluindo uma fundação bem conhecida) e os factos estão a acumular-se: falso alarme sobre o H1N1 sob a influência de lobbies farmacêuticos, perturbadora complacência com o glifosato que a OMS declarou seguro apesar das vítimas do herbicida, cegueira para as consequências da poluição ligada às empresas petrolíferas em África, redução em vítimas humanas dos desastres nucleares de Chernobyl a Fukushima e os desastres do uso de munições de urânio empobrecido no Iraque ou nos Balcãs, não reconhecimento da Artemísia para proteger os interesses das empresas farmacêuticas apesar da sua eficácia comprovada no tratamento da malária.

A independência da organização está comprometida tanto pela influência de lobbies industriais - especialmente farmacêuticos - quanto pelos interesses dos seus Estados membros, em particular: a China. O presidente de um país disse: "Acho que a Organização Mundial de Saúde deveria ter vergonha de si mesma porque se tornou porta-voz da China". A instituição de Genebra, que havia subestimado a ameaça do ebola (mais de 11 mil mortos), é ainda acusada de negligenciar as doenças tropicais, em favor de mercados mais suculentos. Uma pesquisa realizada em 2016 (a OMS nas garras dos lobistas) forneceu uma radiografia edificante da OMS ao pintar um retrato de uma estrutura enfraquecida, sujeita a múltiplos conflitos de interesse. Esta investigação mostrou o quanto os interesses privados dominam as questões de saúde pública na OMS. Não é aceitável que o dinheiro que a financia venha principalmente de uma pessoa e que esteja infiltrada por lobbies. Recentemente, a OMS ficou ainda mais prejudicada ao cair na armadilha do Lancet Gate quando um simples estudante descobriu a fraude.

Na época da gripe H1N1: o Dr. Wolfgang Wodarg, presidente do Comité de Saúde da Assembleia Parlamentar do Conselho da Europa, criticou a influência da indústria farmacêutica sobre cientistas e funcionários da OMS, dizendo que isso levou à situação em que "desnecessariamente milhões de pessoas saudáveis corriam o risco de vacinas mal testadas" e que para uma estirpe de gripe ela era "muito menos prejudicial" do que todas as epidemias de gripes precedentes. Ele tinha toda a razão, pois, posteriormente, a vacina fez 1.500 vítimas de narcolepsia, 80% das quais eram crianças, como veremos. Ele também culpou a OMS por alimentar o medo de uma "falsa pandemia", e qualificou-a como "um dos maiores escândalos médicos deste século" e exigiu uma investigação.

De facto, os critérios para declarar uma pandemia (como gravidade) foram alterados pela OMS sob a influência de lobbies farmacêuticos para que eles possam vender vacinas a países ao redor do mundo. De acordo com um relatório da Assembleia Parlamentar do Conselho da Europa sobre a gestão da gripe H1N1, onde se inclui a OMS: "desperdício de fundos públicos significativos e existência de receios injustificados relacionados com riscos para a saúde... foram identificados no que diz respeito à transparência dos processos de tomada de decisão relacionados com a pandemia, o que levanta preocupações sobre a possível influência que a indústria farmacêutica poderia ter exercido em relação às principais decisões relacionadas com a pandemia. A Assembleia teme que esta falta de transparência e responsabilidade enfraqueça a confiança dos cidadãos nas opiniões das principais organizações de saúde pública". A história repete-se hoje com exactamente os mesmos actores e a mesma companhia de medo. O ex-secretário-geral do departamento de saúde pública da OMS revelou noutra pesquisa (TrustWHO) que na época do H1N1 ninguém tinha medo na OMS e que ele não conhecia ninguém na OMS que tivesse sido vacinado, incluindo a ex-Directora Geral: a chinesa Margaret Chan. Embora seja um alto funcionário da OMS, ele e a maioria dos seus colegas foram excluídos de uma reunião entre o CEO e as empresas farmacêuticas que fabricam a vacina com o motivo: "Esta é uma reunião privada. "...

tivesse COVID- 19, gostaria de procurar tratamento na China!

Uma vez, também qualifiquei a China de "muito aberta" e "muito transparente". Como podemos acreditar nessas declarações? Como pode alguém acreditar que, se tivesse COVID-19, ele iria para a China para tratamento? Como podemos acreditar que o mundo deve inspirar-se na China e que o combate à epidemia deve ser feito com "métodos à antiga"?

O que é alucinante é que ele conseguiu fazer engolir as suas patranhas ao mundo inteiro. Porque, infelizmente: desde as suas declarações e o relatório que supervisionou (onde podemos ler que os métodos chineses são: "ágeis e ambiciosos"), os países do mundo implementaram medidas desproporcionais e seguiram cegamente a OMS confinando as suas populações. O medo e a psicose foram disseminados retratando o SARS-CoV-2 como um vírus muito perigoso ou mortal, quando não é absolutamente o caso.

[...] Autoridades canadenses eleitas para a Câmara dos Comuns convocaram mesmo o funcionário da OMS para comparecer depois dele ter recusado convites para testemunhar perante o Comité Permanente da Saúde. Até o líder interino do Partido Conservador Canadense questionou a exactidão dos dados da OMS no COVID-19. De facto, dizer que a China reduziu o número de casos ou geriu bem a epidemia e achatou a curva graças ao confinamento é uma mentira pura e não se baseia em nenhuma evidência, porque ninguém é capaz de dar os números. o número de casos ou mortes na China se não houvesse confinamento forçado. [...]

The madness reached the point where in some countries: beaches were bleached with bleach, mustache and bearded firemen forbidden to work, plexiglass were installed everywhere (even in classrooms) as if it were the Black Death, a train was stopped because a person wore no mask, families deprived of seeing their dead (as if the virus was going to jump out of the body and bite them), septuagenarians fined for going out to throw out the garbage and even coins and notes from abroad were "isolated"!

How were countries able to accept falling into this level of madness, stupidity and dictatorship? Especially those who claim to be democratic. All of this is due to a virus that causes 85% of benign forms and by which 99% of infected people are cured. WHO urged the world to copy China's response to COVID-19 and it succeeded; all countries in the world, following WHO blindly, have become a conforming copy of China. Only a few countries have refused to foolishly imitate others, such as Sweden or Belarus, which can be congratulated. [...]

17. We say that we must stop blindly following WHO because it is not a wise society and is far from being independent, as we have seen. Asked why the decision to make 11 vaccines mandatory, a former health minister from a European country replied: "It is a public health decision that, in fact, meets a WHO global goal. which today asks all countries in the world to ensure the vaccination of 95% of children, with the vaccines that are necessary".

We also recommend that governments carefully choose the experts who advise them and avoid those with ties to pharmaceutical companies; A great professor of infectious diseases made this observation about some experts from a European country: "A prominent member of the Commission for Communicable Diseases of this Board of Governors thus received 90,741 euros from the pharmaceutical industry, including 16,563 euros from [a pharmaceutical laboratory that produces a competing hydroxychloroquine molecule]. However, it was this Superior Council that issued the famous opinion banning hydroxychloroquine, except for the dying ... I see no trace in this opinion of compliance with the conflict of interest management procedure ... If a member presents a conflict of interest greater interests, he must leave the meeting and not participate in the debates or the drafting of the opinion ... However, at the end of this opinion, there is no mention of conflicts of interest or the number of qualified members who participated in the vote. This is a serious violation of the rules ". [...]

18. We say to governments: stop following - in epidemics - the mathematical models that are virtual things unrelated to reality and that on several occasions diverted the world and served as a justification for crazy confinement policies. In fact, a European university that has strong links to WHO said that:

This site uses cookies from Google to deliver its services and to analyze traffic. Your IP address and user agent are shared with Google, together with performance and security metrics, to ensure quality of service, generate usage statistics and to detect and address abuse.

[LEARN MORE](#) [OK](#)

At the time, the press found that the university's dean, who advised WHO and governments, received a salary of £ 116,000 a year from the H1N1 vaccine manufacturer.

And today, it is based on the same defective model, developed for the planning of the flu pandemic, that gave their astrological predictions for COVID-19; they said 500,000 will die in the UK, 2.2 million in the USA, 70,000 in Sweden and between 300,000 and 500,000 in France! Who can believe these crazy numbers? That is why Professor Didier Raoult qualifies these models as: "a modern form of divination".

Professor John Ashton also denounced these astrological predictions and the fact that they have some kind of religious status. In addition, the press found that anyone who wants, at this university, has encouraged governments to confinement, not even respecting those who advocated it. Here too, it is necessary to conduct a survey of some employees of this European university. Professor Jean-François Toussaint said of the confinement: "We must at all costs prevent any government from making such a decision. Especially since the instrumentalization of the pandemic with widespread confinements for half of humanity will only have resulted in the strengthening of authoritarian regimes and the suspension of campaigns. of prevention against the main deadly diseases. In France, simulations that estimate that 60,000 lives have been saved are pure fantasy ". The famous international slogan: "Stay home, save lives" was simply a lie. On the contrary, confinement killed many people.

19. WE REFUSE the mandatory vaccination and WE REFUSE the obligation to have a coronavirus vaccination certificate to travel, for the following reasons:

- The vaccine is not essential because 85% of the forms are benign, 99% of those infected recover and children and pregnant women are not at risk.

- In addition, a large part of the population is already protected against SARS-CoV-2 thanks to

cross-immunity acquired with seasonal coronaviruses. To say that we are not sure is A LIE and to question the duration or effectiveness of that protection is manipulation to protect the vaccine's business plan.

- It is an RNA virus, therefore more subject to mutations and the vaccine risks being ineffective.

- Vaccine testing is being carried out in a hurry and some are asking to speed up testing procedures and skip the usual tests to understand the safety risks that can lead to unjustified setbacks during the pandemic and in the future.

- Previous trials of vaccines against coronavirus are worrying: in 2004, one of the vaccines developed against SARS caused hepatitis in animals in which it had been tested. Another vaccine being tested has severely damaged the lungs of laboratory animals, making them more susceptible to future infections. Vaccines developed against another coronavirus, the feline infectious peritonitis virus, increase cats' risk of developing the disease caused by the virus. Similar phenomena have been observed in animal studies for other viruses, including the coronavirus that causes SARS.

- Some vaccines are being tested by companies that have no experience in the manufacture and marketing of vaccines and that use new technologies in medicine whose health benefits or risks are unknown.

- The search for the financial profit of many pharmaceutical companies at the expense of the health of the populations (without generalizing, of course, in the whole).

This site uses cookies from Google to deliver its services and to analyze traffic. Your IP address and user agent are shared with Google, together with performance and security metrics, to ensure quality of service, generate usage statistics and to detect and address abuse.

And there are people who see: dollars ... you have big labs that say, now is the time to earn billions. "

On June 16, 2020, professor Christian Perronne, an infectious disease specialist, told Sud Radio about the coronavirus vaccine: "We don't need it ... All of this is a purely commercial story." The website of Nexus magazine published on August 7 the opinion of Dr. Pierre Cave who said: "The epidemic ended in France ... as a doctor, I have no hesitation in anticipating government decisions: We must not just refuse these vaccines [against COVID-19], but denouncing and condemning the purely commercial approach and the abject cynicism that guided its production ".

- Outrageous ethical violations in many clinical trials: as Western countries do not allow them to violate ethical principles, many pharmaceutical companies (without generalizing them all) conduct their clinical trials of drugs and vaccines in developing or poor countries, where experiences are performed on people without them having the least knowledge and without their consent. The report written by Irene Schipper (SOMO information document on ethics in clinical trials) showed shocking and very serious ethical violations; in a clinical trial, for example, African women contracted HIV and subsequently became ill with AIDS. This clinical trial was funded by a well-known foundation and also by a laboratory. In some countries,

- A pharmaceutical company: AstraZeneca has signed an agreement with several countries that allows it to obtain immunity from any legal claims, in case the vaccine has harmful side effects. In other words, it is the states and not AstraZeneca that will compensate the victims, that is, with citizen's money! In this regard, we say to the citizens: MASSIVELY protest against this scandalous, shameful and deeply unjust agreement until it is suppressed. You must refuse this IRRESPONSIBLE use of your money. Even Belgian experts were "shocked" by this deal.

- The dangerous or even fatal vaccine scandals developed during an epidemic and we will mention two examples (we are not, of course, anti-vaccines, as this means questioning Edward Jenner's findings):

The H1N1 vaccine scandal: it was tested on a small number of people and, despite it, was marketed as safe in 2009. But, a year later, concerns were expressed in Finland and Sweden about the possible association between narcolepsy and vaccine. A subsequent cumulative (cohort) study in Finland reported a 13-fold increased risk of narcolepsy after vaccination in children and young people aged 4 to 19, most of whom appeared within three months of vaccination and almost all within the following six months. . It was only in 2013 that a study published in the British Medical Journal confirmed these results for Britain, also 37. In total, this dangerous vaccine caused 1,500 cases of narcolepsy in Europe alone, and 80% of the victims are children. Some of the NHS medical personnel were also affected by narcolepsy.

[...] Peter Todd, a lawyer who represented many of the plaintiffs, told the Sunday Times: "There has never been a case like this before. The victims of this vaccine are incurable for life and will need many medications ". Among the child victims of the vaccine: Josh Hadfield (eight), who takes anti-narcolepsy drugs that cost £ 15,000 a year to help him stay awake during the day at school. [...] The families suffered a trial that lasted 7 years to obtain justice. And instead of the pharmaceutical industry compensating them, it is the states that have done it, that is, with citizens' money! [...]

20. We say: STOP with all these crazy, dictatorial and certainly unsanitary measures and because of tragedies every day, 60,000 cancer patients are at risk of dying in England because of delays in diagnosis and treatment, according to Professor Karol Sikora, 12,000 people worldwide are at risk of starvation every day (according to Oxfam), the number of cardiac arrests has doubled in some countries, companies are going bankrupt, 305 million jobs full-time were destroyed - affecting mainly women and young people - according to the international labor organization, a man died because of the mask in the United States, etc. [...]

21. We tell governments: EVERYTHING must return to normal immediately (including the reopening of hospital services, air transport, the economy, schools and universities) and this worldwide hostage taking must stop because you knew, with evidence to prove

mayor of a European city said: "The climate transmitted [on the subject of the coronavirus] is particularly miserable and is becoming suspicious. "Dr. Olivier Chailley wrote a book entitled: "The fear virus or how the whole world has gone mad. "Professor Sucharit Bhakdi (who also wrote a letter to Angela Merkel) said of the measures taken, including those of containment: "Grotesque, absurd and very dangerous measures ... a horrible impact on the world economy ... self-destruction and collective suicide ...".

22. We tell the citizens: to keep you in the fold, it is possible that some will try to discredit us by all means, for example, by accusing us of conspirators or of being defenders of conspiracy theories, etc. Do not listen to them, they are LIARS because the information we have given you is: medical, scientific and documented.

23. We say to citizens: this letter must not incite violence against anyone. React peacefully. And if a health professional who signs this letter is attacked, defamed, threatened or persecuted: support him MASSIVELY. Dear citizens: Many scientists, eminent medical professors and health professionals around the world have spoken out against what is happening and it is time to wake up! If you don't say anything, new "made in China" dictatorial measures will be imposed. You have to REFUSE this. We ensure that these measures have nothing to do with medicine or hygiene or the preservation of public health, they are dictatorship and madness. Dr. Anders Tegnell said: "The world has gone mad" by putting in place the constraints that "go against what is known about the management of virus pandemics".

24. We invite health professionals from ALL OVER THE WORLD to be strong and courageous and to fulfill their duty to tell the truth, to join MASSIVELY in the collective: **United Health Professionals** and to sign this letter by sending the following 4 information: first name, surname, profession and country for:

join.unitedhealthprofessionals@gmail.com
